Examples of IRS Form 1095-A

Why are some of the fields in Part III of my Form 1095-A blank?

The information in Part III could be blank for a number of reasons. Here are some details about why you may see this on your Form 1095-A.

Column A will be completed only for the months that you had coverage. For any month that you did not have coverage there will be no premium amount listed for that month, and you will see a blank field. In the example below, the person was covered from February to October so those are the only months that have a premium amount.
Column B and C will be blank if you did not receive advanced premium tax credit. These columns are only completed for the months when you received advanced premium tax credit. If there is a value in column B for a particular month then there will also be a value in column C for the same month. In the example below, the person received advanced premium tax credit for the entire year so columns B and C have values in them for all months of the year.
In this example, the person was covered for the entire year, but they did not receive advanced premium tax credit so columns B and C are blank.

Please be aware that if you did not receive advanced premium tax credit then MNsure will not provide the value in Column B on your Form 1095-A. You will need to come to our website to calculate this value for entry on Form 8962 if you plan to apply for the premium tax credit. You can find the premium amount for your applicable second lowest cost silver plan (SLCSP) here (https://www.mnsure.org/current-customers/tax-info/report-credit/slcsp-howto.jsp).
